Sol-u-Bre® is so nutritionally diverse it has been known to "fill in the gaps" of many essential vitamins, minerals and antioxidants missing in today's modern diet.

The **Tocotrienols** in Sol-u-Bre® help in maintaining the anti-inflammatory properties inherent to Vitamin E for those suffering with any type of chronic pain disorder. Sol-u-Bre® also contains superior forms of **Vitamin B Complex**, which are crucial for energy metabolism.

Lipoic Acid is an essential key that unlocks energy from the food we eat while at the same time helps to normalize healthy blood sugar levels. It also helps protect the body against the damage that can cause heart disease, cancer, aging, strokes, arthritis, diabetes and most degenerative diseases.

All of the **Essential Fatty Acids** are found in Sol-u-Bre® which are great for skin disorders such as eczema or psoriasis. They also help in the normal function and development of the brain. A deficiency of EFA'S has been shown to impair the ability to learn and recall information.

All of the **Essential Amino Acids** are contained in Sol-u-Bre®. Amino acids are required to form the brain's neurotransmitters which are the chemicals that permit our brains to receive and send messages. Unless Amino Acids are present together, in the correct proportion, and even if vitamins and minerals are absorbed and assimilated, they will not be effective, unless amino acids are present.

Gamma Oryzanol has extremely positive effects on blood lipids and metabolism. It is a natural replacement for anabolic steroids that helps build muscle. These nutrients reportedly flow through your body in a surge of regeneration moments after they are ingested.

CoEnzyme Q10 is a powerful antioxidant; it activates beta receptor cells which allow the body to recognize the insulin it produces and protects the brain from free radical damage. It also helps reduce clogged arteries of the heart. CoEnzyme Q10 is a vitamin-like substance that resembles vitamin E, but may be an even more powerful antioxidant. It has the ability to counter histamine and is valuable to allergy and asthma sufferers. It is beneficial in aging, obesity, multiple sclerosis, periodontal disease and diabetes.

Phyosterols are natural phytonutrients, which help to modulate hormone levels. Hormones are involved in nearly all our bodily functions. They carry messages to cells all over the body, influencing activities such as growth, metabolism, cholesterol transport, bone building and sexual development. Phyosterols are natural plant compounds that are converted during the normal digestive process into hormones. A healthy cell knows precisely how to grow, when to divide and when to stop. If the genetic information within the cell is injured or altered, the cell may begin to behave erratically. This often leads to cancers and tumors, which can grow malignant and spread throughout the body. Researchers have discovered that phyosterols may help manipulate the hormonal environment in a favorable way, and by doing so, may help prevent hormone related cellular changes from occurring. In conclusion, Sol-u-Bre® is 100 percent rice bran. Added to a daily diet, it will provide a healthy person with fiber, vitamins, minerals and antioxidants medical studies show are needed to stay healthy. Sol-u-Bre® will often enhance the diet of a person under a physician's care for many of America's most threatening diseases. Rice bran is one option everyone should discuss with their physician, nutritionist and fitness expert as a source of fiber, vitamins, minerals and antioxidants.
